

Third-Party Integration

LendingFront's architecture makes it highly extensible. Serving lenders of all types—including banks, credit unions, CDFIs, merchant processors, and others—no two LendingFront implementations are alike. This document reflects the most common data services and platforms that LendingFront has integrated with. However, it should not be considered exhaustive. Based on client needs, and other factors, LendingFront can integrate with additional services that enable clients to use the LendingFront platform for a very wide range of use cases.

APPLICATION INTAKE	
	• Salesforce • Postal code locator
UNDERWRITING: CREDIT DATA & DECISIONING
